                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                     This clone is available from RZPD;
contact RZPD (customer.service@rzpd.de) for further information.
This CDS clone is a part of a collection of human full length
expression clones generated by RZPD.
This CDS has been cloned without stopcodon.
The CDS has been inserted into pDONR201 via a BP Clonase(TM)
reaction. Additional sequence has been added in front of the start
codon (ATG): att. AAAAA GCT GGC ACC CCT GGT CCA GGT (RAG)
After the last codon additional sequence has been added: CCA GGC
CCA GGC Gin front of the 3' att site (AC CCA GGT TTC TT).
Compared to the reference sequence NM_003206 we did not find any
amino acid exchanges.

                                                                                                                                                          arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Submitted (20-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 20, 2002 this sequence version replaced gi:22856693.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.

```
sequencing project.
This sequence is from the
BBSRC/Dundee/Nottingham/Sanger/Sheffield/UMIST cDNA collection,
from a library constructed by Elizabeth Bosch. cDNA was prepared
from RNA extracted from ovary, normalised, and poly A-trimmed.
BCORI.NotI cut cDNA was then ligated into the vector. Vector:
PBluescript II KS(+); Site_I: ECORI; Site_2: NotI Host: Escherichia
coli DH10B.
On Apr 1, 2004 this sequence version replaced gi:41633328.
BBSRC/Dundee/Nottingham/Sanger/Sheffield/UMIST Gallus gallus cDNA
                                                                                                                                                                                                                               Location/Qualifiers

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Description

                                                                                                                                                                                                                          This clone is available from RZDD, context RZDD (customer.servicedrzdd.de) for further information. This CLOs clone is a part of a collection of human full length expression clones generated by RZDD.

This CDS has been cloned without stopcodon.

The CDS has been inserted into pDONR201 via a BP Clonase(TM) reaction. Additional sequence has been added in front of the start codon (ATG); att. .AAAAA GCT GCC ACC CCT GGT CCA GGT (ATG) After the last codon additional sequence has been added: CCA GCC CCA GCG Gin front of the 3' att site (AC CCA GGT TTC TT). Compared to the reference sequence NM_003206 we did not find any amino acid exchanges; clone distribution: http://www.rzpd.de/products/orfclones/.

This sequence is from the BBSRC/Dundee/Nottingham/Sanger/Sheffield/UMIST cDNA collection, from a library constructed by Elizabeth Bosch. cDNA was prepared from RNA extracted from ovary, normalised, and poly A-trimmed. EcoR1-NotI cut cDNA was then ligated into the vector. Vector: pBluescript II KS(+); Site_1: EcoRI; Site_2: NotI Host: Escherichia coli DH10B.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    THE STATE OF THE S
                                                                                                                             8
protein regulating gene expression PRGE-23 (see AAYS8630). The CDNA was initially isolated from spleen tissue CDNA library SPLNOT10, and the full-length sequence assembled from overlapping clones from a number of libraries. PRGE-23 is expressed in reproductive, developmental and urologic tissues associated with cancer, inflammation and foetal protein. The invention provides PRGE polypeptides (see AAYS8608-38) protein. The invention provides PRGE polypeptides (see AAYS8608-38) and polynucleotides (see AAZ57839-68), expression exclose, agonists and antagonists. It also provides methods for diagnosing, treating or preventing disorders associated with expression of PRGE. Polynucleotides are also used as sources of probes and primers for diagnosis and monitoring of disease, also for detecting related sequences and in gene mapping
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180
